

QUICK TIP!

Hey Kids! Time for a super fun math lesson, courtesy of Math Madness!

DIVIDING WHOLE NUMBERS

- Work your way across the dividend from left-to-right.
- For each digit, write the number above the digit that, when multiplied by the divisor, will be the closest to the value you are currently working with without going over.
- Write the result of the multiplication below the digit and subtract from the current value.
- Drop the next digit down and repeat
- If you reach the end of the dividend and can't divide what's left over any further, any "leftovers" can be written as a remainder.

$$\begin{array}{r}
 5 \overline{)261} \rightarrow \begin{array}{r} 0 \\ 5 \overline{)261} \\ -0 \\ \hline 2 \end{array} \rightarrow \begin{array}{r} 05 \\ 5 \overline{)261} \\ -0 \\ \hline 26 \\ -25 \\ \hline 1 \end{array} \rightarrow \begin{array}{r} 052 \\ 5 \overline{)261} \\ -0 \\ \hline 26 \\ -25 \\ \hline 11 \\ -10 \\ \hline 1 \end{array} \rightarrow \begin{array}{r} 052r1 \\ 5 \overline{)261} \\ -0 \\ \hline 26 \\ -25 \\ \hline 11 \\ -10 \\ \hline 1 \end{array}
 \end{array}$$

Dividend

Divisor

TRY IT!

$$3 \overline{)624}$$

$$5 \overline{)102}$$

$$8 \overline{)428}$$

$$6 \overline{)203}$$

$$4 \overline{)128}$$

$$9 \overline{)108}$$

$$2 \overline{)331}$$

$$4 \overline{)812}$$

$$7 \overline{)414}$$
