

**QUICK TIP!**

Hey Kids! Time for a super  
Fun math lesson, courtesy of  
Math Madness!

**ADDING MIXED FRACTIONS**

To add or subtract Mixed Fractions with common denominators:

- Convert both terms to improper Fractions with a common denominator.
- Next, do the addition or subtraction.
- Finally, use division to convert the answer back to a Mixed Fraction or whole number if needed.

$$6\frac{1}{3} + 5\frac{1}{3} = \frac{19}{3} + \frac{16}{3} = \frac{35}{3} = 11\frac{2}{3}$$

$$10 - 2\frac{1}{2} = \frac{20}{2} - \frac{5}{2} = \frac{15}{2} = 7\frac{1}{2}$$

**TRY IT: ADDITION!**

$$8\frac{2}{8} + 3\frac{1}{8} =$$

$$4\frac{2}{3} + 2\frac{2}{3} =$$

$$23 + 1\frac{1}{5} =$$

$$3\frac{2}{4} + 2\frac{3}{4} =$$

$$5 + 4\frac{2}{5} =$$

$$5\frac{3}{7} + 6\frac{5}{7} =$$

**TRY IT: SUBTRACTION!**

$$4\frac{2}{3} - 1\frac{1}{3} =$$

$$8 - 2\frac{1}{4} =$$

$$5\frac{2}{7} - 3\frac{4}{7} =$$

$$9 - 5\frac{2}{5} =$$

$$3\frac{3}{4} - 5\frac{1}{4} =$$

$$5 - 4\frac{1}{2} =$$
